

Removal procedure for TV unit on 02 BMW 3 Series Compact.

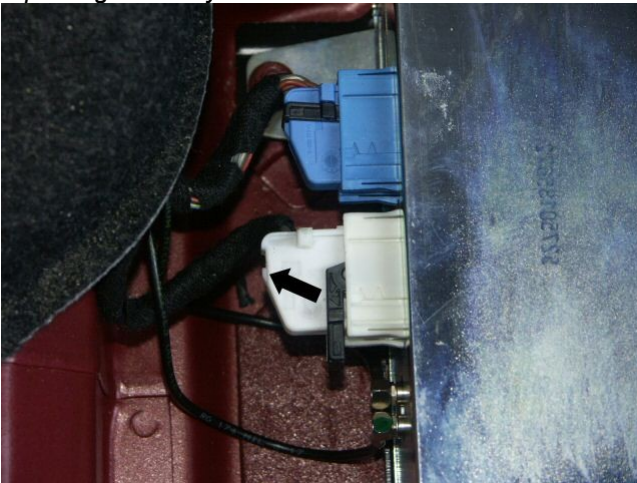

Note. Follow this procedure at your own risk.

It is often recommended that the negative lead of the battery be removed before working on any electrical components. Remember to note fuel consumption and average speed data if you want to keep it as this data is volatile and will be lost when the battery is disconnected.

Picture 1. The TV unit for the BMW Compact is located under the boot mat next to the battery. First remove the black polystyrene tool holder. *(When replacing ensure you leave an air gap next to the unit)*

Picture 2. Remove the two plugs by first pressing down on the top of the clip next to the black retaining clip (arrowed) and slide the black clip down the sloping side until it is at 90 degrees from where it started. *(When replacing ensure you start with the black tab in the 90 degree position)*

The two single leads just pull out but need firm pressure. I doubt it matters which way they go back, but just in case I marked one with a green felt pen before I removed it.

Picture 3. The unit is held in with one 10mm nut and two 8mm bolts.

Picture 4. My unit is numbered..

6 924 749

037138054 022814 01

LEAR HW:06/SW:15 A1:01 22031

Picture 5. Once levered off from the mounting bracket the unit can easily be prised open. As you can see there's no user serviceable parts inside. And due to the nature of the construction the only plug is very unlikely to work loose.
